

UI / Product Clarifications

Open questions before finalizing Del 1, Del 6 & Del 7

To	Client / Product Owner

Project	Fixa2an — vehicle repair marketplace (Sweden)

Hi,

While implementing the Fixa2an UX according to the design boards (Del 1–10), a few flows need your confirmation. We don't want to assume the wrong behaviour and rebuild later.

Please reply under each question (short answers are fine).

1. Del 1 — Create a case (Skapa ett ärende)

Guest / first-time user & email verification

In the create-case flow, the customer can start without being fully logged in (upload protocol / describe the problem → car & contact details → send request).

There is **no dedicated screenshot** in the UX PDF for what happens around email verification / magic link after they enter their email.

Please confirm:

1. When a new customer submits a case with their email, should they **first verify that email via magic link** (click link in inbox) before the request is actually sent to workshops?

- **Option A:** Yes — case is held until they click the magic link, then it goes live.
- **Option B:** No — case is sent immediately; magic link is only for later login / returning to the app.
- **Option C:** Something else (please describe).

2. If they are already logged in, do we skip magic-link verification completely?

3. If you have a preferred copy/screen for “Check your email” after create-case, please share it (or confirm we can use the same magic-link screen as Del 7 login).

2. Del 6 — Payment & review (Betalning & omdöme)

Payment method, keys, cash-at-workshop & platform commission

The mockups show a payment overview, receipt, then rating/review. We need clarity on how money actually moves.

Important: In the Del 6 UI boards, **platform commission is not mentioned anywhere** (no line item for the customer, no note for the workshop). We need you to confirm whether Fixa2an still earns commission on completed jobs, and how that works behind the scenes.

2.1 Payment provider

1. Which payment method should we integrate for in-app payment?

- Klarna
- Stripe
- Swish
- Other: _____

2. Can you provide (or arrange access to) the **sandbox / live API keys** and any merchant account details for that provider?

3. Should payment happen **inside Fixa2an** (customer pays in the app, then we show receipt), or is the payment screen mainly a **cost summary** while the customer still pays the workshop by other means?

2.2 Cash / direct payment to the workshop

Some customers may pay the workshop **in cash or by card on site**, without using the app payment step.

1. What should the app show in that case?

- Customer marks “I paid at the workshop” and continues to review?
- Workshop marks the job as paid?
- Payment step is skipped entirely for cash?

2. Who is responsible for confirming that payment happened (customer, workshop, or both)?

2.3 Platform commission (not shown in the UI)

Because commission does not appear in the customer payment screens, please confirm the business rule:

1. **Does Fixa2an take a platform commission on each completed job?**

- Yes
- No
- Only in some cases (please describe)

2. If **yes**, what is the model?

- Fixed % of the job total (e.g. 10%) — please state the rate: _____%
- Fixed fee per booking
- Other: _____

3. Who pays the commission — the **workshop** (settled later via invoice / wallet), or is it deducted automatically when the customer pays in-app?

4. If the customer pays the workshop **directly in cash / on site**, does the **platform still get commission**?

- **Yes** — workshop still owes Fixa2an commission (invoice / settlement later).
- **No** — commission only when payment goes through Fixa2an.
- **Other**: please explain.

5. Should commission ever be visible to the customer in the app, or stay **workshop/admin only** (as in the current UI)?

3. Del 7 — Account & help pages (Konto & hjälpsidor)

Same customer app vs separate portal

Del 7 shows login (magic link), account overview, my cars, settings, help/contact, FAQ, and policies — often in a more **web / desktop** layout with marketing header and footer.

Please confirm:

1. Is Del 7 the **same customer product** as the mobile app (one account, same data, responsive web + mobile), just shown in a wider layout?

- **Option A:** Same app / same portal — one codebase, responsive for mobile and web.
- **Option B:** Separate web portal (different entry URL / shell), sharing the same backend and user accounts.
- **Option C:** Separate product entirely (please clarify who uses it).

2. Should “My cars”, Settings, Help & FAQ live inside the existing **Profile** area of the customer app, or as their own main sections in the nav?

3. For guests who only used magic link once: is Del 7 login the **primary** way returning customers sign in going forward?

How to reply

You can answer inline, for example:

1.1 → Option B

2.1.1 → Stripe (+ keys via secure channel)

2.3.1 → Yes, platform commission applies

2.3.2 → 10% of job total, invoiced to workshop monthly

2.3.4 → Yes, commission still applies on cash/on-site payments

3.1 → Option A

If anything is still undecided, tell us the temporary assumption you want us to build with so development can continue without blocking.

Thanks — once we have these answers we can lock the flows and avoid rework.

Development team · Fixa2an

Note: Please share API keys through a secure channel (not email plaintext) when ready.
